Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       seq length: 0

CC (see AAY5860-10), and off a 3'UTR extension PCR product. The encoded CC protein (see AAY66073) is a transcription factor or transcription-CC associated factor that may associate with vimentin fibres, perhaps CC as part of a docking mechanism regulating nuclear translocation. CC intermediate filaments. Mutated APGD1 polypeptides co-segregate With autoimmune polyendocrinopathy candidiasis ectodermal dystrophy CC (APECED). The invention provides vectors and host cells for preparation of APGD1 polypeptides. APECED-associated mutations CC preparation of APGD1 polypeptides. APECED-associated mutations CC (CCTG), normally found at position 1086-1089, at nucleotides CC (CCTG), normally found at position of an adenosine at position of CC 1284; an insertion of a cytosine at position 1365; a deletion of the cytosine at position 1309 or 1313; a cytosine to conclustion exchange at position 1909 or 1313; a cytosine to consistion 374; a guanosine to adenosine to guanosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1952; cand a cytosine to adenosine exchange at position 1962; cand a cytosine to adenosine exchange at position 1964. A claimed comethod for testing for a mutation in the APGD1 gene or for a cytosine to adenosine exchange at position 1964. A claimed method for the APGD1 polypeptide. APGD1 gene or for a cytosine to adenosine exchange at position and the apgon to for the diseas This is the nucleotide sequence of human autoimmune polyglandular disease type 1 (APGD1 or AIRE) cDNA. It is a composite of 2 clones, which were obtained from a human adult thymus cDNA library by PCR The encoded

                                                                                                                              The present sequence encodes an autoimmune regulator-2 (AIR-2) protein. The AIR polypeptides and polynucleotides can be used in methods for the diagnosis and treatment of diseases related to immune maturation and regulation of immune response towards self and nonself. They can be used particularly in the diagnosis and treatment of autoimmune polyendocrinopathy candidiasis ectodermal dystrophy (APECED) (also known as autoimmune

                                                                                                                                                                                                                                                                                                                            This is the nucleotide sequence of murine AIRE cDNA. Murine AIRE is the homologue of the human AIRE (or autoimmune polyglandular disease type 1, APGD1) gene (see AAX58605). The overall nucleotide sequence identity between the mouse AIRE coding sequence and that of the human is 76.67%. The mAIRE gene was localised to chromosome 10. Human mutated APGD1 co-segregates with autoimmune polyendocrinopathy candidiasis ectodermal dystrophy (APECED). The murine homologue may be used to develop an animal model for APECED, to examine the events that lead to the development of APECED and possibly to develop agents for preventing and/or treating this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12-NOV-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                   to immune maturation and regulation of immune response towards self and nonself. They can be used particularly in the diagnosis and treatment of autoimmune polyendocrinopathy candidiasis ectodermal dystrophy (APECED) (also known as autoimmune polyglandular syndrome type I (APS I)).
                                                                                                                         protein. The AIR polypeptides and polynucleotides can be used in methods for the diagnosis and treatment of diseases related to immune maturation and regulation of immune.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antonarakis S, Heino

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid reukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel

                                                                                                                                                                                                            marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                            1996
                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast in the diagnosis treatment and prevention of: (b) cancer, bone, bone marrow breast castrointestinal tract liver lives are recentled.

                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                          δÃ
                                                                                                                                                                                                                                                                                                         ARK54951 to ARK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat discorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703 CC to AAK87694 represent human immune/haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 cc represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                              Query Match 6.9%;

                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703 CC to AAK87694 represent human immune/haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 CC represent sequences used in the exemplification of the present invention.

                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                                                               The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast can ovarian cancer and other cancers of the adrenal gland, bone, bone CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital; CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative (c) cardiovascular disorders such as myocardial ischaemias; CC epilepsy; and (f) infectious diseases e.g. cerebral anoxia and CC and parasitic infections.

CC Note: The sequence data for this patent did not form part of the CC printed specification, but was obtained in electronic format directly xxx

                                                                                                                                                                                                                                                                The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer useful and ovarian cancer and other cancers of the adrenal gland, bone, bone (b) immune disorders e.g. Addison's disease, allergies, autoimmune (b) autoimmune thyroiditis, diabetes mellitus, Crohn's colitis; (c) cardiovascular disorders such as myocardial ischaemias, entities (c) cardiovascular disorders such as myocardial ischaemias, epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                          Sequence 26427 BP;
                                                                                                                                                                                                                                           printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14078-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      05-DEC-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DЬ
                           monitoring the progression of bone tissue deposition. Specific conditions include postmenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteodystrophy, drug-induced abnormalities in bone formation or bone loss, conditions that involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated CDNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fire, wipo.int/pub/published_pct_sequences.

                                                                                                                    В
                                                                                                                                                                                                                                     29
                                                                                                                                                                                                                                           CC amino acid sequences given in AAM82170 to AAM81921. (1) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (1) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC expression by rectifying mutations or deletions in a patient's genome CC expression by rectifying moduction of the proteins or to CC polynucleotides may be used to production of 10. Additionally, (1) CC the nucleic acids into a host cell and culturing the cell to express the CC protein. (1) proteins and polynucleotides may be used to produce the secreted (1), by inserting CC cancers and cancer metastases of haematopoietic-related diseases, especially to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM64703 represent sequences used in the exemplification of the present invention.

CC ABLB7934, (III) encoding (II) having a sequence (S2), a T cell

(C) population of (II), or antigen presenting cells that express (II).

(C) (II) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological contacting a biological sample preferably serum or ovarian tissue. The method comprises (C) contacting a biological sample from a patient with (IV), detecting the amount of polynucleotide hybridising to (IV) and comparing the amount to gradient, where the amount of polynucleotide bybridising to (IV) is cells (C) patient, where the amount of polynucleotide bybridising to (IV) is detected preferably by polymerase chain reaction (PCR). (I) comprising CC specific for an ovarian tumour protein comprising contacting T cells (C) specific for an ovarian tumour protein comprising contacting T cells (C) with (III) or (II), (III) is useful in design and preparation of cand proteins in tumour cells; and to isolate a full length gene from a contacting techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 15
